Senlab© Evaluation Kit
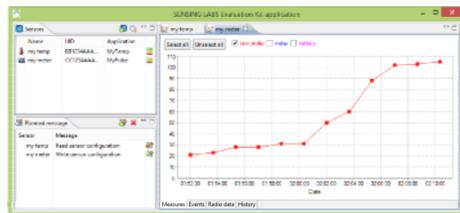

Enter into Sensing Labs long range wireless sensors world with the new Senlab© Evaluation kit !

Senlab© evaluation kit allows you to evaluate the performances of Sensing Labs wireless sensors that embed LoRa™ long range spread spectrum technology, providing significantly longer range than conventional modulation techniques as well as high interference immunity whilst minimising current consumption.

Evaluation kit sensors are fully representative of Senlab© sensors radio performances and will allow you to get a precise idea of the disruptive range offered by Sensing labs products.

Evaluation software

Pulse sensor

Temperature sensor

USB modem

LoRa™

Senlab© evaluation kit is made up of :

- 1 metering sensor to be connected to any type of pulse meter OR 1 temperature sensor
- 1 USB modem to be connected to a PC
- 1 Evaluation software for the set-up process, sensors remote parameterization and sensors data retrieving (sensor values, logged events, RSSI, SNR, …)

Kit	Commercial ref.	Price[1]
Metering Evaluation kit	KIT-DE-METERING	390 Euros HT
Temperature Evaluation Kit	KIT-DE-TEMPERATURE	

(1) pre-tax price excluding transport cost
